

AMENDMENTS TO THE CLAIMS:

Please amend Claims 11, 13 through 16, 18 through 21, 23 through 27, 30, and 31 as follows:

1 - 10. (Cancelled)

11. (Currently Amended) A method of generating a plurality of moving picture files, the method comprising:

receiving (a) moving picture data, from a camera unit, and (b) ~~information about a camera control of command for controlling~~ the camera unit which is taking the moving picture data, from a terminal apparatus displaying the moving picture data taken by the camera unit;

determining a time for dividing the moving picture data, for generating plural moving picture files based on the ~~information about the camera control command for controlling~~ of the camera unit which is taking the moving picture data;

dividing the moving picture data at the time determined at the determining step; and

generating a plurality of moving picture files, each including divided moving picture data divided at the dividing step.

12. (Cancelled)

13. (Currently Amended) The method according to claim 11, wherein the information about the camera control of the camera-unit command is information a command relating to switching of the camera unit to another camera unit.

14. (Currently Amended) The method according to claim 11, wherein the information about the camera control of the camera-unit command is information a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed.

15. (Currently Amended) The method according to claim 11, wherein the information about the camera control of the camera-unit command is information relating to a change amount per unit time a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed, and

wherein the determining step determines the time for dividing the moving picture data based on timing at which the change amount per unit time exceeds a predetermined change amount per unit time.

16. (Currently Amended) An apparatus for generating a plurality of moving picture files, comprising:

a receiving unit configured to receive (a) moving picture data, from a camera unit, and (b) ~~information about a camera control of command for controlling~~ the camera unit which is taking the moving picture data, from a terminal apparatus displaying the moving picture data taken by the camera unit;

a determining unit configured to determine a time for dividing the moving picture data, for generating plural moving picture files based on the ~~information about the camera~~ control of command for controlling the camera unit which is taking the moving picture data;

a dividing unit configured to divide the moving picture data at the time determined by the determining unit; and

a generating unit configured to generate a plurality of moving picture files, each including divided moving picture data divided by the dividing unit.

17. (Cancelled)

18. (Currently Amended) The apparatus according to claim 16, wherein the ~~information about the camera~~ control of the camera unit command is information a command relating to switching of the camera unit to another camera unit.

19. (Currently Amended) The apparatus according to claim 16, wherein the ~~information about the camera~~ control of the camera unit command is information a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed.

20. (Currently Amended) The apparatus according to claim 16, wherein the ~~information about the camera~~ control of the camera unit command is information relating to a change amount per unit time a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed, and

wherein the determining device determines the time for dividing the moving picture data based on timing at which the change amount per unit time exceeds a predetermined change amount per unit time.

21. (Currently Amended) A computer readable medium which stores a program for executing a method of generating a plurality of moving picture files, the method comprising:

receiving (a) moving picture data, from a camera unit, and (b) ~~information about a camera~~ control ~~of command for controlling~~ the camera unit which is taking the moving picture data, from a terminal apparatus ~~displaying the moving picture data taken by the camera unit;~~

determining a time for dividing the moving picture data, for generating plural moving picture files based on the ~~information about the camera~~ control ~~of command for controlling~~ the camera unit which is taking the moving picture data;

dividing the moving picture data at the time determined at the determining step; and

generating a plurality of moving picture files, each including divided moving picture data divided at the dividing step.

22. (Cancelled)

23. (Currently Amended) The medium according to claim 21, wherein the ~~information about the camera~~ control ~~of the camera unit~~ command is ~~information a command~~ relating to switching of the camera unit to ~~other another~~ camera unit.

24. (Currently Amended) The medium according to claim 21, wherein the information about the camera control of the camera unit command is information a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed.

25. (Currently Amended) The medium according to claim 21, wherein the information about the camera control of the camera unit command is information relating to a change amount per unit time a command indicating that at least one of pan, tilt, and zoom of the camera unit is being processed, and

wherein the determining step determines the time for dividing the moving picture data based on timing at which the change amount per unit time exceeds a predetermined change amount per unit time.

26. (Currently Amended) A method of generating a plurality of moving picture files, the method comprising:

receiving (a) moving picture data, from a camera unit, ~~and~~ (b) area information about a prohibited area which is prohibited from being displayed, from a terminal apparatus, ~~and~~ (c) a camera control command for controlling the camera unit which is taking the moving picture data, from the terminal apparatus;

determining a time for dividing the moving picture data, based on the area information about the prohibited area ~~which is prohibited from being displayed~~ and the camera control command such that a first moving picture file based on a first moving picture data received in a period between a first time and a second time, a second moving picture file based on a second

moving picture data received in a period between the second time and a third time, and a third moving picture file based on a third moving picture data received in a period between the third time and a fourth time are generated in a case where the camera unit is controlled in accordance with the camera control command such that (a) the first moving picture data does not include the prohibited area, (b) the second moving picture data includes the prohibited area, and (c) the third moving picture data does not include the prohibited area; and

dividing the moving picture data at the time determined at the determining step,
wherein the first, second, and third moving picture files are generated based on the moving picture data divided in the dividing step.

27. (Currently Amended) A computer readable medium which stores a program for executing a method of generating a plurality of moving picture files, the method comprising:

receiving (a) moving picture data, from a camera unit, and (b) area information about a prohibited area which is prohibited from being displayed, from a terminal apparatus, and (c) a camera control command for controlling the camera unit which is taking the moving picture data, from the terminal apparatus;

determining a time for dividing the moving picture data, based on the area information about the prohibited area ~~which is prohibited from being displayed obtained~~ and the camera control command such that a first moving picture file based on a first moving picture data received in a period between a first time and a second time, a second moving picture file based on a second moving picture data received in a period between the second time and a third time, and a third moving picture file based on a third moving picture data received in a period between

the third time and a fourth time are generated in a case where the camera unit is controlled in accordance with the camera control command such that (a) the first moving picture data does not include the prohibited area, (b) the second moving picture data includes the prohibited area, and (c) the third moving picture data does not include the prohibited area; and

generating the first, second, and third moving picture files based on the moving picture data having been divided as determined in the determining step.

28. (Previously Presented) The method according to claim 11, wherein the determining step determines the time for dividing the moving picture data based on the timing of controlling the camera unit toward a pre-set position.

29. (Previously Presented) The medium according to claim 21, wherein the determining step determines the time for dividing the moving picture data based on the timing of controlling the camera unit toward a pre-set position.

30. (Currently Amended) The method according to claim 11, wherein the ~~information about the camera control of the camera unit command~~ information a command relating to changing the direction of the camera unit.

31. (Currently Amended) The medium according to claim 21, wherein the ~~information about the camera control of the camera unit command~~ information a command relating to changing the direction of the camera unit.
